

Anotech is looking for **Structural/Seismic Engineers**.

Job Description:

Main responsibilities consist in building numerical models, make hand calculations and technical report writing. You will collaborate with an international team of structural engineers. The contract position can be remote or from our office in Bucharest, Romania.

Job requirements:

- Master degree in civil/structural engineering;
- 0-3 years of experience in structural engineering (experience/knowledge on pushover analyses, Non-linear kinematic analyses and time histories is an advantage). If no experience, it is important to show the seismic background through the academic studies;
- Knowledge of the following software packages are also a strength: 3Muri, Midas, Rhino, Revit and Autocad;
- Knowledge on masonry structures is a plus;
- Extreme willingness to learn;
- Good communication skills in English, both spoken and written.

Offer:

Challenging job within a start-up engineering company with great ambition;
Good salary based on experience;
Great international working environment;
